## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-2, 5-10, 12-16 and 18- 20 are rejected under 35 U.S.C. 102(b) as being anticipated by US 6,338,935.

The reference discloses a recording medium and method of making where the medium comprises a substrate having a fluoropolymer layer thereon. The fluoropolymer is formed of a fluorescent material such as a coumarin, a thermoplastic polymer, and solvent. See col. 4. The fluoropolymer layer is spin-coated onto the substrate and subjected to embossing with a stamper and curing. See col. 5-6. The stamper may squeeze the fluoropolymer against the substrate to form discrete areas of fluoropolymer. See col. 5. The stamper may be released from the layer before or after curing. See col. 5-6. The embossing tool is a stamper or roller. See col. 3, line 40. The medium may comprise multiple layers where at least one layer is ROM. See col. 6.

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Art Unit: 1794

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 3, 4, and 11 are rejected under 35 U.S.C. 103(a) as being unpatentable over US 6,338,935 in view of US 6,027,595.

The '935 reference discloses the recording medium and method of making as described in the above 102 rejection. It is recognized that the reference does not disclose a stamper formed of PDMS. However, the '595 reference shows that it is known to use PDMS embossing tools as they have superior release characteristics. See col. 4. Therefore, it would have been obvious to one of ordinary skill in the art to use a PDMS embossing tool in the '935 method. One would be motivated by the reasoned expectation of obtaining the improved release property of the '595 emboss tool in the '935 method of making a recording medium.

Claim 17 is rejected under 35 U.S.C. 103(a) as being unpatentable over US 6,338,935 in view of US 6,309,729.

The '935 reference discloses the recording medium and method of making as described in the above 102 rejection. It is recognized that the reference does not include an etching step in making the recording medium. However, the '729 reference shows that etching a fluoropolymer recording material to form discrete areas is known. See col. 7. Therefore, it would have been obvious to one of ordinary skill in the art to use an etching technique to form the discrete areas in the '935 medium. One would be motivated by the reasoned expectation of controlling the height or depth of the discrete areas.
